APPLICATION: SW DEVELOPER

Dear Danfoss.

It is with great excitement that I submit my application to Danfoss's SW developer position.

I am a graduate within Software Engineering and with great interest in data analytics, IoT and Energy Informatics.

With my bachelor in Software engineering I have knowledge within all development phases from idea to product. I know the consequences that an early decision might have on later development, and therefore understand the importance of architectural design as well as the importance of building a system that is both customizable and maintainable. In my Master's in Software engineering, I studied and applied advanced system designs to overcome many of the problems with the current market. I know that an IT business cannot exists if it is too slow in bringing its products to the market, or by delivering the wrong or faulty products. In order to deal with these risks, I have worked with both systems and processes designed to continuously deliver and deploy incremental solutions. During my studies I have also been acquainted with many different agile processes including SCRUM which i have also used during my work at Powel Denmark.

Thank you in advance for the time you dedicated to my application. I am looking forward to hearing from you.

Best regards,

Emil Sebastian Rømer
